

Enhanced Security

Complete Peace of Mind

1 SSO Implementation

Consolidate access to one primary login makes IT easier to use and easier to manage. IT can turn off access, immediately, when needed.

Email Encryption

Set up email encryption to ensure data matching specific criteria is encrypted as it's sent.

3 Data Loss Prevention for Email

Do you have a specific industry data type you need to secure such as financial or health data? We can configure your email tenant to prevent emailing, downloading and even copying that data.

Litigation & Compliance Hold for Email

Your email system can be set up to allow for litigation and compliance reviews. This can be based on specific retention policies or used as-needed. Just let us know the requirement!

5 Intrusion Detection & Intrusion Prevention for Your Network (IDS/IPS)

Many regulatory/compliance frameworks recommend leveraging IDS/IPS within your network. We advise this as another layer of security - allowing IT to see more detailed information we can act on, sooner.

IT Disaster Recovery Planning

Ensure your systems are resilient! We identify ways to mitigate the impact of disasters.

7 Mobile Device Management Implementation

Gain control over mobile devices (laptops and smartphones) enabling IT to send policies remotely and quickly lock access when devices are lost or stolen, even outside your network.

Implement Zero Trust

We implement the best tool for your environment to comply with the Zero Trust security framework, which requires authentication, authorization, and continuous validation for all users - regardless of network location - to access applications and data.
